

Barclay Friends Preston, Issue II: June 2019

Preston Building Update

As the weather heats in Pennsylvania, so does progress at the Preston Building project! Currently, foundations, concrete retaining walls, and footings are being installed. Working through wet conditions, the Preston Building footprint is taking shape as the A section foundations continue. Through June, perimeter retaining wall construction continues, giving the campus a feel for the size of the building and future surroundings to come. As June comes to a close, keep an eye out forthcoming block construction, steel erection, and underground mechanical construction to begin shortly.

We enjoy returning to the Barclay Friends campus and are excited about the work rising from the ground. The team is truly enjoying the construction of this beautiful building as progress sweeps the campus.

The lower level of the future Preston building, shown here. Currently, the last retaining wall is being formed, Area B footings are being poured, and masonry work is beginning.

Meet your Project Team!

Eric is the Project Engineer serving the Barclay Team, working closely with subcontractors through coordination, ensuring a timely and accurate performance is obtained pushing the project forward. He works closely with his team to provide the critical information and approvals ensuring the correct direction is being provided, serving as a link between Barclay, Bernardon and Warfel Trade partners. A native of Lancaster County, Eric is a passionate cyclist who enjoys spending his free time riding, racing and being outdoors.
