

Barclay Friends Preston, Issue III: July 2019

Preston Building Update

Despite the rain and extreme heat, the future Preston Building continues to grow! Currently, you will notice the structural retaining wall come to close and concrete pours conclude. In addition, all footing concrete pours are complete, giving this home a footprint. From an aerial view, you can see A section, closest to the Cotter building, B section and finally C section closest to the edge of the property. Currently, the project is in preparation of structural steel and concrete decking, which will take place within a few short days. As of the end of July, backfill around the building is nearly complete. Additionally, underground utilities (water mains, wastewater, electricity, etc.) are underway.

As seen in these photos, block stairtowers have been raised and steel bearing plates installed for structural steel to begin swinging over the jobsite.

Meet your Project Team!

Bill is the senior project superintendent serving the Barclay Team, working closely with subcontractors, vendors, and the client. He works closely with his team to provide a detailed schedule guiding the project despite setbacks such as weather or unforeseen events. Bill is a seasoned veteran of the construction business, with years of experience and a diverse variety of projects throughout his career. Bill enjoys spending time with his family, gardening, projects around the house, skiing whenever possible, and of course, spending time at the beach over the summer.
